Bengaluru, India · +91 88470 84345 · varun.garg405@gmail.com · linkedin.com/in/varun-garg-b1b64a192

Full-stack engineer with 2+ years at Oracle, where I joined a stress testing product right after ideation and contributed across the entire stack. I fixed broken UI flows, built analytical scenario engines, and shipped GenAI automation now used by banks and financial institutions. Received the Oracle Pacesetter Spark Award in my first year. Outside work, I build open-source AI tools including a RAG-based chatbot.

EXPERIENCE

Associate Application Developer

Aug 2023 – Present

Oracle Financial Services Software Limited · Bengaluru, India

- Received the **Oracle Pacesetter Spark Award** within the first year, recognition given to a rare few for delivering outsized impact early in their tenure.
- Joined the Stress Testing and Scenario Analytics (STSA) product right after its ideation phase and took core ownership of the **Scenario module**, the most critical object in the platform used by banks and financial institutions worldwide.
- Took over a fragmented UI codebase, **fixed broken screens and underlying logic**, and improved data visualization by introducing graphs, making it significantly easier for analysts to interpret scenario outputs.
- Introduced a **metadata-driven Template Builder** for the internal dev and config team that renders complete UI screens purely from database configuration, cutting screen delivery time from **3 to 4 days down to under 1 hour** per screen.
- Worked on the **scenario execution engine**, writing Java APIs that translate user-configured scenarios into runtime queries, which are dynamically injected into calculation pipelines during execution.
- Optimized SQL schemas and batch queries for the execution layer, achieving a **30 to 40% reduction in processing time** across high-volume financial datasets.
- Shipped a **GenAI automation workflow** using Python, Wayflow, and Oracle Code Assist where a single user prompt triggers the model to fetch required data from the web and auto-generate analytical objects, replacing a fully manual process and cutting configuration effort by roughly 60%.

Software Engineer Intern

Jan 2023 – Jun 2023

MeritHub Technologies (PeerHook) · Mohali

- Built **Golang REST APIs** and a MongoDB data layer for a real-time chat application; delivered cross-platform clients in Flutter for mobile and HTML/CSS/JS for web, both from scratch.
- Replaced a polling-based messaging setup with an **MQTT event-driven architecture**, which handled concurrent users without latency spikes and kept the chat experience smooth across both platforms.

PROJECTS

VarChatBot · Open Source · React/Next.js · Node.js/Express · OpenAI GPT · RAG · Pinecone/FAISS

- An open-source **RAG-powered Q&A chatbot** where users ask questions in plain language and the system retrieves answers grounded in a custom knowledge base using OpenAI GPT and vector search.
- Handles the full pipeline from document ingestion, chunking, embedding, and indexing through to a **streaming React/Next.js chat UI** backed by a Node.js/Express server managing sessions and API calls.
- Tuned the prompting layer to keep responses factually grounded across multi-turn conversations, which noticeably reduced hallucinations compared to a standard GPT integration.

EDUCATION

B.Tech, Computer Science and Business Systems · CGPA: 7.54

Aug 2019 – Aug 2023

Thapar Institute of Engineering and Technology · Patiala, India

SKILLS

Languages: Java · Python · Golang · TypeScript · JavaScript · SQL **Frontend:** React · Next.js · React Native · Flutter · HTML/CSS/JS · OJET

Backend and DB: Spring Boot · Node.js/Express · REST APIs · MongoDB · Oracle SQL **Tools:** Git · Postman · Wayflow · MQTT

AI/ML: OpenAI API · RAG · LangChain · Vector DBs (Pinecone, FAISS) · Prompt Engineering · GenAI Workflows
